(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 4-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Aoki (US 4,900,884). Aoki discloses a composite cooking system having microwave heating and induction heating comprising a commercial power supply (20), a high frequency inverter (30) for converting electric power of the commercial power supply (20) into high-frequency power and supplying the high-frequency power to a high-voltage transformer (40), a high-voltage rectification circuit (41-43, col. 4, lines 41-42) and a magnetron (44) being connected to secondary output of the high-voltage transformer (40), input current detector (col. 5, lines 18) which detects a current value of the high-frequency inverter (30), and controller (60) for controlling the high-frequency inverter (30), characterized in that if the detection value of the input current detector has a predetermined difference from a target value continuously for a given time (col. 8, lines 42-48), the controller stops the high-frequency inverter (col. 8, lines 25-30, and col. 8, lines 51-68 and col. 9, lines 1-5).

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Maehara et al (US 4,967,051) discloses a high-frequency heating apparatus having start control device for magnetron power supply circuit. Takashige et

al (US 6,552,313) discloses a high-frequency heating apparatus for maximizing input current while securing a uniform margin relative to the cutoff current.
